1. Background

Surf Life Saving WA (SLSWA) completed a Coastal Aquatic Risk Assessment for the City of Wanneroo in July 2014 covering the Two Rocks area from The Spot south of the Marina through to Durras Beach on the northern side. Since this risk assessment erosional issues have altered conditions north of Two Rocks Marina forcing the closure of the main beach access point off Sovereign Drive. As a result, a new access is proposed from the northern end of Sovereign Drive. The City of Wanneroo has appointed SLSWA to conduct a Coastal Aquatic Risk Assessment of the section of beach north of Two Rocks Marina (Two Rocks (N)) and provide recommendations regarding beach access to the area.

2. Site Identification

2.1 Area Summary

A 1.5km stretch of beach was assessed from the northern side of the breakwater north to a rocky outcrop (Figure 1). The southern corner of the beach has experienced erosion and is partly backed by a makeshift seawall to protect the backing dunes. The beach receives waves averaging just over 1m, which maintains a low tide terrace and at times, a transverse bar and rip system, with rips occurring along the length of the beach. Along the length of the beach there is a rock platform which extends from the beach out into the wave zone. The beach is backed 4-10m high foredunes with several small blowouts, then vegetated transgressive dunes that extend up to 5km inland. Several 4WD tracks reach the back of the beach.

Figure 1: Overview of study area with north and south limits marked in red. (Google Earth)
2.2. Observations

There are currently four access points to Two Rocks (N), two of these are informal access points located just north of the marina, one formal access from the middle of Sovereign Drive which is currently closed and an informal access to be formalised at the northern end of Sovereign Drive. Details of these access points are provided in Appendix B. The two informal access points at the southern end are in effect closed off with users able to access the beach via steep dunes and a rock wall. Continued access through these points is hazardous to beach users and will lead to continued erosion of the dunes. The main stair access at the centre of the beach is an ongoing issue; at the time of initial risk assessment in 2014 this path led beach users straight into the water. Currently the dunes beneath the stairs are heavily eroded making the stairs unsafe for use. As a result of this the City of Wanneroo has proposed the development of a new access track at the northern end of Sovereign Drive. In its current state this track is an uneven four wheel drive grass and sand track which weaves through the dunes reaching the beach through a large blowout.

The 1.5km section of beach extending north from the Two Rocks Marina, inclusive of both the beach in front of the existing staircase and the beach in front of the proposed short term access track, is not ideal for swimming activities due to the presence of submerged rocks and reef platforms which occur consistently along the beach extending from the beach into the wave zone. These rock platforms can be exposed or submerged depending on tide, waves and weather conditions. They pose a hazard to recreation in the water with risk of head injuries and other minor injuries from slipping or being dumped on the rocks by waves. The beaches to the south of Two Rocks Marina (Wreck Point through to The Spot) are more suitable for swimming and other recreational activities. The section of beach north of the Marina is suitable for other recreational activities including beach walking/jogging, fishing and other beach based activities.

3. Recommendations

In terms of beach access to the area, the proposed access seems suitable in terms of safety and ease of access given the presence of an existing informal track and reduced dune height in the blowout compared to alternative access points. The City of Wanneroo should consider formalising the new access track with fencing to ensure beach users stick to the designated path through the blowout. This will prevent the creation of more informal tracks through the dunes and prevent further erosion of dunes. Given the width of the track and access through the dunes the City of Wanneroo should consider formalising this track for use as an emergency access for approved vehicles.

Appendix D contains appropriate signage to be installed at each of the new track. There are many informal tracks through the dunes which branch off the formal track and use of these could result in beach users missing signage. Formalising the track will to ensure all beach users accessing the beach are exposed to the beach signage.

RECOMMENDATION 1
The City of Wanneroo should formalise the access track at the northern end of Sovereign Drive and install appropriate signage at either end of the track.

RECOMMENDATION 2
The City of Wanneroo should consider closing all informal access to the beach.

RECOMMENDATION 3
The City of Wanneroo should consider formalising the new access track as a wider four wheel drive track providing access to emergency vehicles.
Appendix A: Graphical Observations

Stair access from Sovereign Drive in May 2014.

Stair access from Sovereign Drive in September 2016.

View south from the proposed new access showing consistent reef platforms along the beach.

View north from the proposed new access showing reef platforms. Note that some rock platforms are submerged in the surf zone.

Informal beach access from the north side of Two Rocks Marina.

Steep beach access via dunes on the north side of Two Rocks Marina.
