

Coastal Erosion Hazard Maps

State Coastal Planning Policy (SPP2.6) provides methods to prepare coastal erosion hazard maps

Storm erosion from a potential 1 in 100 year storm event (S1)

+

Continuation of historical erosion trends (S2)

+

Erosion from sea level rise of 0.9m over next 100 years (S3)

+

Uncertainty factor of 0.2m (horizontally) per year

Hazard lines provide an estimate of areas that **may be at risk** from coastal erosion over the next 100 years

Hazard lines are **not a prediction** of future shoreline positions
