#### **NOTE**

This Bushfire Management Plan has been developed by Smith Consulting for the exclusive use of the client, Westbury Investments Pty Ltd and their agents.

The plan has been compiled using the standard methodologies required by Western Australian government departments and agencies. It is based on the following:

- State Planning Policy 3.7 Planning in Bushfire Prone Areas (SPP 3.7), December 2015
- Guidelines for Planning in Bushfire Prone Areas, December 2017
- Australian Standard 3959 Construction of buildings in bushfire-prone areas (incorporating amendments 1, 2 and 3), March 2009
- Standard fuel load field data collection methods and conversion to a fuel load applicable for the appropriate fire spread models.

The techniques described in the above publications have been applied in the appropriate areas and circumstances for the development of this document.

Where there was no public access the interpretation is based on photographic and satellite imagery, and a laser distance meter was used to measure distances and effective slope.

It is recommended that this Bushfire Management Plan be revised every five years to ensure that it remains relevant and in-line with current requirements. This will optimise protection. It is proposed that the property owners undertake the review.

#### **DISCLAIMER**

This Bushfire Management Plan has been prepared in good faith. It is derived from sources believed to be reliable and accurate at the time of publication. Nevertheless, this plan is distributed on the terms and understanding that the author is not responsible for results of any actions taken based on information in this publication or for any error or omission from this publication.

Smith Consulting has exercised due and customary care in the preparation of this Bushfire Management Plan and has not, unless specifically stated, independently verified information provided by others.

Any recommendations, opinions or findings stated in this report are based on circumstances and facts as they existed at the time Smith Consulting performed the work. Any changes in such circumstances and facts upon which this document is based may adversely affect any recommendations, opinions or findings contained in this plan.

#### **Section 1: Proposal Details**

**Figure 1.** The site plan as provided with the development application.

The proposal is to create 32 lots in a new subdivision. This subdivision is located very close to other recently subdivided areas. The area is designated as bushfire prone. The subdivision site is cleared.

Figure 2. Aerial photo of the bushfire prone area for the subject site.

#### **Section 2: Environmental Considerations**

This site is cleared ready for subdivision. Roads are in place.

#### **Subsection 2.1: Native Vegetation – modification and clearing**

There is no need for any clearing of native vegetation associated with this subdivision.

#### Subsection 2.2: Re-vegetation/Landscape Plans

The public open space is developed with reticulated trees planted and playgroup facilities built.

#### **Subsection 3.1: Assessment Inputs**

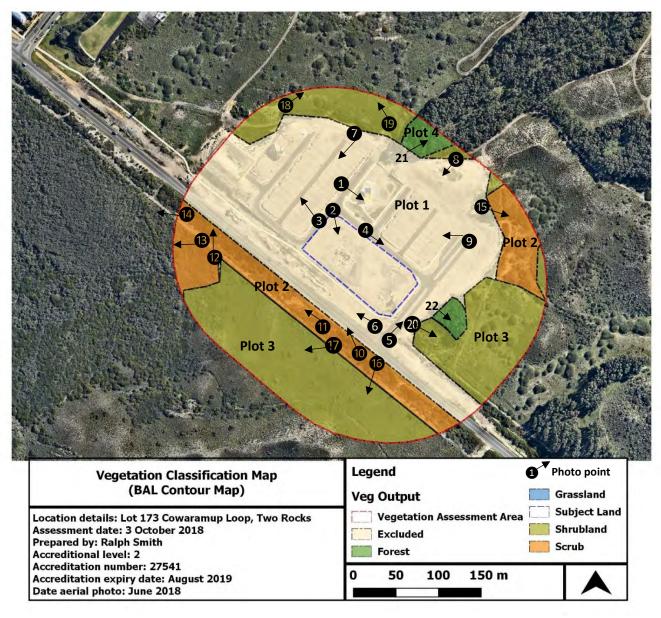

Figure 3. Vegetation classification map

| Method 1 BAL Determination            |   |  |  |                             |  |
|---------------------------------------|---|--|--|-----------------------------|--|
| Vegetation<br>Area/Plot               | Applied<br>Vegetation<br>Classification | Effective Slope Under<br>the Classified<br>Vegetation<br>(degrees) | Separation Distance to<br>the Classified<br>Vegetation<br>(metres) | Bushfire<br>Attack<br>Level |  |
| 1                                     | Exclusion                               | Not applicable   | Not applicable   | LOW                         |  |
| 2                                     | Scrub                                   | 4.52°  | 39   | 12.5                        |  |
| 3                                     | Shrubland and grass*                    | 2.06°  | 31   | 12.5                        |  |
| 4                                     | Forest<br>(plantation)                  | 3.09°<br>(upslope)   | 44   | 12.5                        |  |
| Determined Bushfire Attack Level 12.5 |   |  |  |                             |  |

#### Note

- 1 The slope and distance in the above table are to the closest vegetation from the development site boundary.
- 2 For the mixed shrubland and grass vegetation classification the precautionary principle has been applied and the shrubland category has been applied for the BAL assessments.

#### Section 4: Identification of bushfire hazard issues

The most significant bushfire hazard to this development is the vegetation to the west. This large tract of land that is separated from the development by Two Rocks Road and managed vegetation within the road reserve to the east. The prevailing summer winds for the area are westerly winds.

The old plantations with their grass surface vegetation pose a similar bushfire threat as the mixed grass and low shrubland areas.

By constructing to the appropriate construction standard as described in AS 3959 will ensure the optimum level of protection from a bushfire.

### Section 5: Assessment against the Bushfire Protection Criteria

#### **Subsection 5.1: Compliance**

| Bushfire                           | Method of Compliance   | Proposed bushfire management strategies  |  |  |  |
|------------------------------------|--|--|--|--|--|
| protection criteria                | Acceptable solutions   |  |  |  |  |
| Element 1:<br>Location             | A1.1 Development location  | This development is located and will developed in such a manner that on completion will be at BAL–12. All dwellings will be rated as BAL–12.5 because of the set back from the lot boundary.       |  |  |  |
| Element 2:<br>Siting and<br>design | A2.1 Asset Protection Zone (APZ)   | There will not be any APZ required on these lots.  |  |  |  |
| Element 3:<br>Vehicular            | A3.1 Two access routes.  | There are multiple access options that facilitate movement to a range of alternative locations and directions of travel. There will be a temporary EAW (268 metres) that links to Archipelago Way. |  |  |  |
| access                             | A3.2 Public road   | All public roads have been constructed to the appropriate standards as required in the Guidelines.   |  |  |  |
|                                    | A3.3 Cul-de-sac (including a dead-end-road)  | There will be no dead-end roads in the subdivision that exceed the requirements in the Guidelines.   |  |  |  |
|                                    | A3.4 Battle-axe  | Not applicable.  |  |  |  |
|                                    | A3.5 Private driveway longer than 50m.   | Not applicable.  |  |  |  |
|                                    | A3.6 Emergency access way  | Approval has been given by a neighbouring development to link the bitumen roads with an EAW between Archipelago Way (to the north) and Cowaramup Loop.   |  |  |  |
|                                    | A3.7 Fire service access routes (perimeter roads)  | Not applicable.  |  |  |  |
|                                    | A3.8 Firebreak width   | Firebreaks will be established and maintained in accordance with the City's firebreak and fuel load notice.  |  |  |  |
| Element 4:<br>Water                | A4.1 Reticulated areas   | The site is serviced with reticulated mains water in accordance with the State Government requirements.  |  |  |  |
|                                    | A4.2 Non-reticulated areas   | Not applicable.  |  |  |  |
|                                    | A4.3 Individual lots within non-reticulated areas (Only for use if creating 1 additional lot and cannot be applied cumulatively) | Not applicable.  |  |  |  |

#### **Subsection 5.2: Additional management strategies**

#### Legend

- 1. Subject land
- 2. Cadastre

#### **Notes**

- 1. AS 3959 construction standards apply to the entire area as it is declared bushfire prone areas and the lot is BAL rated at BAL–12.5 or above.
- 2. The site will have reticulated mains water supply.
- 3. Scrub and shrubland to the west are a significant vegetation plot that provide an ongoing bushfire threat.
- 4. The site has been cleared during the development.
- 5. The POS has been developed as 'low threat vegetation'.
- 6. The forest plots have a grass surface vegetation and have a similar bushfire threat as the mixed shrubland and grass areas.

#### Section 6: Responsibilities for Implementation and Management of the Bushfire Measures

| DEVELOPER/LANDOWNER – PRIOR TO SALE OR OCCUPANCY |   |  |  |  |
|--|---|--|--|--|
| No.  | Implementation Action   |  |  |  |
| 1  | Install the access ways, and associated signs to the City standards.            |  |  |  |
| 2  | Install the required water supply that meets State Government's specifications. |  |  |  |
| 3  | All dwellings to be constructed to AS 3959 standards.                           |  |  |  |

| LANDOWNER/OCCUPIER - ONGOING MANAGEMENT |  |  |  |  |  |
|---|--|--|--|--|--|
| No.                                     | No. Management Action  |  |  |  |  |
| 1                                       | Comply with the relevant local government annual firebreak and fuel load notice issued under s33 of the Bush Fires Act 1954. |  |  |  |  |
| 2                                       | Maintain the dwelling to ensure that it complies with the AS 3959 standards.   |  |  |  |  |

#### Appendix 1

Showing the location and distance of the emergency access way (268 metres in length) that links two bitumen roads and provides multiple entry and exit options and destinations.

#### Appendix 2

Extracts from the Guidelines (pages 68 and 71) for the standard of the emergency access way.

#### **ELEMENT 3: VEHICULAR ACCESS**

#### **EXPLANATORY NOTES**

#### E3.6 Emergency access way

An emergency access way is not a preferred option however may be used to link up with roads to allow alternative access and egress during emergencies where traffic flow designs do not allow for two-way access. Such access should be provided as a right-of-way or easement in gross to ensure accessibility to the public and fire emergency services during an emergency.

The access should comply with minimum standards for a public road and should be signposted. Where gates are used to control traffic flow during non-emergency periods, these must not be locked. Emergency access ways are to be no longer than 600 metres and must be adequately signposted where they adjoin public roads.

Where an emergency access way is constructed on private land, a right of way or easement in gross is to be established.

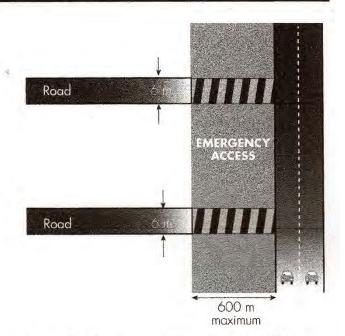

Figure 23: Minimum design requirements for an emergency access way

Two different vehicular access routes, both of which connect to the public road network, should be available to all residents at all times

| Table 4: | Vehicular | access | technical | requirements |
|----------|-----------|--------|-----------|--------------|
|          |           |        |           |              |

| TECHNICAL REQUIREMENTS                   | 1<br>Public<br>road | 2<br>Cul-de-sac | 3<br>Private<br>driveway | 4<br>Emergency<br>access way | 5<br>Fire service<br>access<br>routes |
|--|---------------------|-----------------|--------------------------|------------------------------|---------------------------------------|
| Minimum trafficable surface (m)          | 6*                  | 6               | 4                        | 6*                           | 6*                                    |
| Horizontal clearance (m)                 | 6                   | 6               | 6                        | 6                            | 6                                     |
| Vertical clearance (m)                   | 4.5                 | N/A             | 4.5                      | 4.5                          | 4.5                                   |
| Maximum grade <50 metres                 | 1 in 10             | 1 in 10         | 1 in 10                  | 1 in 10                      | 1 in 10                               |
| Minimum weight capacity (t)              | 15                  | 15              | 15                       | 15                           | 15                                    |
| Maximum crossfall                        | 1 in 33             | 1 in 33         | 1 in 33                  | 1 in 33                      | 1 in 33                               |
| Curves minimum inner radius (m)          | 8.5                 | 8.5             | 8.5                      | 8.5                          | 8.5                                   |
| *Refer to E3.2 Public roads: Trafficable | surface             |                 |                          |                              |                                       |
